ABOUT THE WIRELESS BARRICADE ROUTER

Congratulations on your purchase of the Wireless Barricade™ Broadband Router. SMC is proud to provide you with a powerful yet simple communication device for connecting your local area network (LAN) to the Internet.

IMPORTANT INFORMATION !

For DSL-User without a flat rate contract.

With your DSL-router you have received a device of high quality, which allows you fast and easy access to the Internet.

The factory default settings of this router have been done in a way to provide you with uninterrupted access and use of the Internet. With this background for cost reasons we recommend that you enter into a "flat rate" - contract with your DSL-line provider.

Why should you do that?

Please consider that a router, an entirely independent working device, does not switch off automatically when shutting off your PC!

You may trigger such an automatic shut-off by setting a so called "idle-time" (for details consult your manual at PPPoE or PPTP WAN access configuration). Depending at the set time (1 to 5 min) the router cuts the DSL-link when idle, indeed. But this still does not provide for 100% security.

About the Wireless Barricade Router

This disconnect only happens if there are no more open requests received from either the LAN or the WAN side (here this can be requests from the internet, i.e. initiated through the use of so called file sharing programs like eMule, eDonkey, etc.) that keep the router active.

In order to counter such incalculable activity and protect yourself from higher than expected on-line costs we therefore recommend again a flat-rate contract for your DSL-connection.

The only safe alternative: Pull the plug!

That is to disconnect your router from the mains.

Please feel free to contact our SMC-hotline if you have further questions.

**** flat-rate** is an offer of your DSL-line provider, which gives you timely unlimited access to the Internet at a defined (flat-) rate.

LED Indicators

The SMC7004VWBR V.2 includes status LED indicators, as described in the following figure and table.

LED	Status	Description
PWR (Green)	On	The Wireless Barricade is receiving power.
WLAN (Green)	On	The Wireless Barricade has established a valid wireless connection.
WAN (Green)	On	The WAN port has established a valid network connection.
Link/ACT (Green)	On	The indicated LAN port has established a valid network connection.
	Flashing	The indicated LAN port is transmitting or receiving traffic.
Speed (Amber)	Off	The indicated LAN port has established a valid 10 Mbps network connection.
	On	The indicated LAN port has established a valid 100 Mbps network connection.

Features and Benefits

- Internet connection to DSL or cable modem via a 10/100 Mbps WAN port
- Local network connection via 10/100 Mbps Ethernet ports or 11 Mbps wireless interface (supporting up to 253 users)
- 802.11b compliant – interoperable with multiple vendors
- Provides seamless roaming within 802.11b WLAN environment
- Local network connection via 10/100 Mbps Ethernet ports

About the Wireless Barricade Router

- DHCP for dynamic IP configuration, and DNS for domain name mapping
- Stateful Packet Inspection (SPI) firewall with client privileges, hacker prevention, and NAT
- NAT also enables multi-user access with a single-user account, and virtual server functionality (providing protected access to Internet services such as Web, FTP, mail and Telnet)
- Virtual Private Network (VPN) support using PPTP, L2TP or IPSec pass-through
- User-definable application sensing tunnel supports applications requiring multiple connections
- Easy setup through a Web browser on any operating system that supports TCP/IP
- Compatible with all popular Internet applications

INSTALLING THE WIRELESS BARRICADE ROUTER

Before installing the Wireless Barricade™ Broadband Router, verify that you have all the items listed under “Package Contents.” If any of the items are missing or damaged, contact your local SMC distributor. Also be sure that you have all the necessary cabling before installing the Wireless Barricade. After installing the Wireless Barricade, refer to the Web-based configuration program in “Configuring the Wireless Barricade Router” on page 27 for information on configuring the Wireless Barricade.

Package Contents

After unpacking the Barricade™ Wireless Broadband Router, check the contents of the box to be sure you have received the following components:

- Wireless Barricade Broadband Router
- Power adapter
- One CAT-5 Ethernet cable
- Four rubber feet
- Installation CD containing this User Guide and EZ 3-Click Installation Wizard
- Quick Installation Guide

Installing the Wireless Barricade Router

Immediately inform your dealer in the event of any incorrect, missing or damaged parts. If possible, please retain the carton and original packing materials in case there is a need to return the product.

Hardware Description

The Wireless Barricade can be connected to the Internet using its RJ-45 WAN port . It can be connected directly to your PC or to a local area network using any of the Fast Ethernet LAN ports.

Access speed to the Internet depends on your service type. Full-rate ADSL can provide up to 8 Mbps downstream and 640 Kbps upstream. G.lite (or splitterless) ADSL provides up to 1.5 Mbps downstream and 512 Kbps upstream. Cable modems can provide up to 36 Mbps downstream and 2 Mbps upstream. ISDN can provide up to 128 Kbps when using two bearer channels. PSTN analog connections can now run up to 56 Kbps. However, you should note that the actual rate provided by specific service providers may vary dramatically from these upper limits.

Although access speed to the Internet is determined by the modem type connected to your Router, data passing between devices connected to your local area network can run up to 100 Mbps over the Fast Ethernet ports.

The Wireless Barricade includes an LED display on the front panel for system power and port indications that simplifies installation and network troubleshooting. It also provides 4 RJ-45 LAN ports on the front panel, as well as one RJ-45 WAN port. Full-duplex communications allow data to be sent and received simultaneously, doubling the effective throughput.

- 4 RJ-45 ports for connection to a 10BASE-T/100BASE-TX Ethernet Local Area Network (LAN). These ports can auto-negotiate the operating speed to 10/100 Mbps, the mode to half/full duplex, and the pin signals to MDI/MDI-X (i.e., allowing these ports to be connected to any network device with straight-through cable). These ports can be connected directly to a PC or to a server equipped with an Ethernet network interface card, or to a networking device such as an Ethernet hub or switch.
- One RJ-45 port for connection to a DSL or cable modem (WAN). This port also auto-negotiates operating speed to 10/100 Mbps, the mode to half/full duplex, and the pin signals to MDI/MDI-X.

The following figure shows the components of the Wireless Barricade:

Figure 1. Front and Rear Panels

Installing the Wireless Barricade Router

Item	Description
Reset Button	Use this button to reset the power and restore the default factory settings.
LAN Ports	Fast Ethernet ports (RJ-45). Connect devices (such as a PC, hub or switch) on your local area network to these ports.
WAN Port	WAN port (RJ-45). Connect your cable modem, DSL modem, or an Ethernet router to this port.
Power Inlet	Connect the included power adapter to this inlet. Warning: Using the wrong type of power adapter may cause damage.
LEDs	Power, WAN and LAN port status indicators. (See "LED Indicators" on page 3.)

System Requirements

You must have an ISP that meets the following minimum requirements:

- Internet access from your local telephone company or Internet Service Provider (ISP) using a DSL modem or cable modem.
- A PC using a fixed IP address or dynamic IP address assigned via DHCP, as well as a gateway server address and DNS server address from your service provider.
- A computer equipped with a 10 Mbps, 100 Mbps, or 10/100 Mbps Fast Ethernet card, or a USB-to-Ethernet converter.
- TCP/IP network protocol installed on each PC that needs to access the Internet.
- A Java-enabled Web browser, such as Microsoft Internet Explorer 5.0 or above, or Netscape Communicator 4.0 or above installed on one PC at your site for configuring the Wireless Barricade.

Connect the System

The Wireless Barricade can be positioned at any convenient location in your office or home. No special wiring or cooling requirements are needed. You should, however comply with the following guidelines:

- Keep the Wireless Barricade away from any heating devices.
- Do not place the Wireless Barricade in a dusty or wet environment.

You should also remember to turn off the power, remove the power cord from the outlet, and keep your hands dry when you install the Wireless Barricade.

Basic Installation Procedure

1. Connect the LAN: You can connect the Wireless Barricade to your PC, or to a hub or switch. Run Ethernet cable from one of the LAN ports on the front of the Wireless Barricade to your computer's network adapter or to another network device.

You may also connect the Wireless Barricade to your PC (using a wireless client adapter) via radio signals. Position both antennas on the back of the Wireless Barricade into the desired positions. For more effective coverage, position one antenna along the vertical axis and the other antenna along the horizontal axis. **(The antennas emit signals along the toroidal plane – and thus provide more effective coverage when positioned along alternate axes.)**

2. Connect the WAN: Prepare an Ethernet cable for connecting the Wireless Barricade to a cable/DSL modem or Ethernet router. Prepare a serial cable for connecting the Wireless Barricade to an ISDN TA or PSTN modem.

Installing the Wireless Barricade Router

3. Power on: Connect the power adapter to the Wireless Barricade.

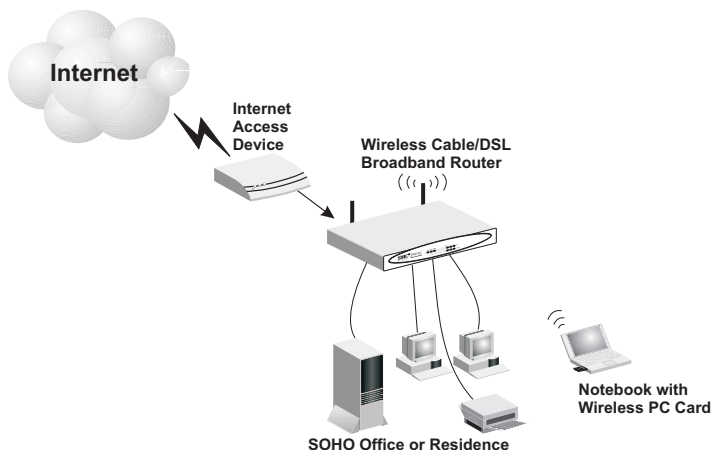

Figure 2. Connecting the Wireless Barricade Router

Attach to Your Network Using Ethernet Cabling

The four LAN ports on the Wireless Barricade auto-negotiate the connection speed to 10 Mbps Ethernet or 100 Mbps Fast Ethernet, and the transmission mode to half duplex or full duplex.

Use twisted-pair cable to connect any of the four LAN ports on the Wireless Barricade to an Ethernet adapter on your PC. Otherwise, you can cascade any of the LAN ports on the Wireless Barricade to an Ethernet hub or switch, and then connect your PC or other network equipment to the hub or switch. When inserting an RJ-45 plug, be sure the tab on the plug clicks into position to ensure that it is properly seated.

Warning: Do not plug a phone jack connector into any RJ-45 port. This may damage the Wireless Barricade. Instead, use only twisted-pair cables with RJ-45 connectors that conform with FCC standards.

Attach to Your Network Using Radio Signals

Install a wireless network adapter in each computer that will be connected to the Internet or your local network via radio signals. SMC currently offers several wireless network cards, including the SMC2602W and SMC2632W Wireless cards.

Rotate both antennas on the back of the Wireless Barricade to the desired position. For more effective coverage, position one antenna along the vertical axis and the other along the horizontal axis. Try to place the Wireless Barricade in a position that is located in the center of your wireless network. Normally, the higher you place the antenna, the better the performance. Ensure that the Wireless Barricade's location provides optimal reception throughout your home or office.

Computers equipped with a wireless adapter can communicate with each other as an independent wireless LAN by configuring each computer to the same radio channel. However, the Wireless Barricade can provide access to your wired/wireless LAN or to the Internet for all wireless workstations. Each wireless PC in this network infrastructure can talk to any computer in the wireless group via a radio link, or access other computers or network resources in the wired LAN infrastructure or over the Internet via the Wireless Barricade.

The wireless infrastructure configuration not only extends the accessibility of wireless PCs to the wired LAN, but also doubles the effective wireless transmission range for wireless PCs by retransmitting incoming radio signals through the Wireless Barricade.

A wireless infrastructure can be used for access to a central database, or for connection between mobile workers, as shown in the following figure:

Installing the Wireless Barricade Router

Figure 3. Making the WLAN Connections

Attach the Wireless Barricade Router to the Internet

If Internet services are provided through an xDSL or cable modem, use unshielded or shielded twisted-pair Ethernet cable (Category 3 or greater) with RJ-45 plugs to connect the broadband modem directly to the WAN port on the Wireless Barricade.

Note: When connecting to the WAN port, use 100-ohm Category 3, 4, or 5 shielded or unshielded twisted-pair cable with RJ-45 connectors at both ends for all connections.

Connecting the Power Adapter

Plug the power adapter into the power socket on the Wireless Barricade, and the other end into a power outlet. Check the indicator marked "PWR" on the front panel to be sure it is on. If the power indicator does not light, refer to "Troubleshooting" on page 67.

CONFIGURING CLIENT TCP/IP

If you have not previously installed the TCP/IP protocols on your client PCs, refer to the following section. If you need information on how to configure a TCP/IP address on a PC, refer to “Setting Up TCP/IP” on page 15.

Installing TCP/IP

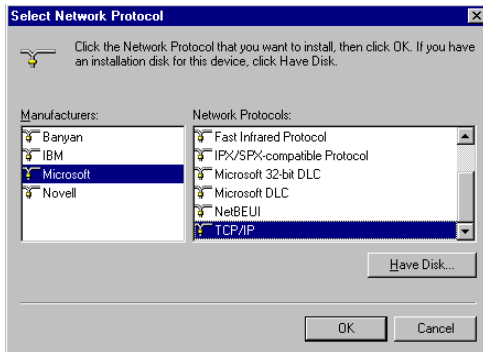

Windows 95/98/Me

1. Click Start/Settings/Control Panel.
2. Double-click the Network icon and select the Configuration tab in the Network window.
3. Click the Add button.
4. Double-click Protocol.

Configuring Client TCP/IP

5. Select Microsoft in the manufacturers list. Select TCP/IP in the Network Protocols list. Click the OK button to return to the Network window.

6. The TCP/IP protocol will be listed in the Network window. Click OK. The operating system may prompt you to restart your system. Click Yes and the computer will shut down and restart.

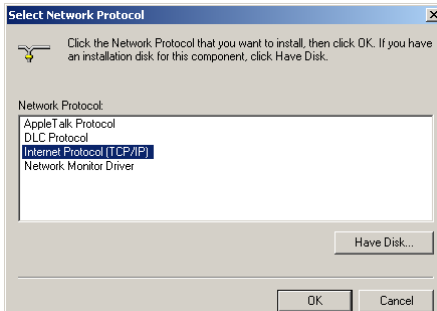

Windows 2000

1. Click the Start button and choose Settings, then click the Network and Dial-up Connections icon.
2. Double-click the Local Area Connection icon, and click the Properties button on the General tab.
3. Click the install... button.

4. Double-click Protocol.

5. Choose Internet Protocol (TCP/IP). Click the OK button to return to the Network window.

6. The TCP/IP protocol will be listed in the Network window. Click OK to complete the installation procedure.

Setting Up TCP/IP

To access the Internet through the Wireless Barricade, you must configure the network settings of the computers on your LAN to use the same IP subnet as the Wireless Barricade. The default network settings for the Wireless Barricade are:

Gateway IP Address: 192.168.2.1
Subnet Mask: 255.255.255.0

Configuring Client TCP/IP

Note: These settings may be changed to suit your network requirements, but you must first configure at least one computer as described in this chapter to access the Wireless Barricade's Web configuration interface. See "Configuring the Wireless Barricade Router" on page 27 for information on configuring the Wireless Barricade.)

If you have not previously configured TCP/IP for your computer, refer to "Configuring Client TCP/IP" on page 13. The IP address of the connected client PC should be 192.168.2.x (where x means 2–254). You can set the IP address for client PCs either by automatically obtaining an IP address from the Wireless Barricade's DHCP service or by manual configuration.

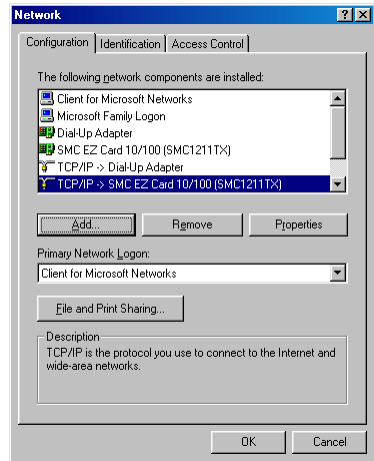

Configuring Your Computer in Windows 95/98/Me

You may find that the instructions here do not exactly match your version of Windows. This is because these steps and screenshots were created in Windows 98. Windows 95 and Windows Millennium Edition are very similar, but not identical, to Windows 98.

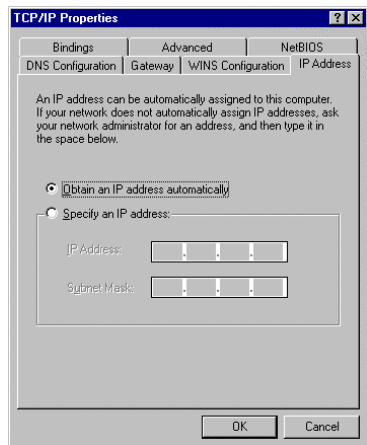

1. From the Windows desktop, click Start/Settings/Control Panel.
2. In the Control Panel, locate and double click the Network icon.

Setting Up TCP/IP

3. On the Network window Configuration tab, double-click the TCP/IP entry for your network card.

4. Click the IP Address tab.

5. Click the "Obtain an IP address" option.
6. Next click on the Gateway tab and verify the Gateway field is blank. If there are IP addresses listed in the Gateway section, highlight each one and click Remove until the section is empty.
7. Click the OK button to close the TCP/IP Properties window.

Configuring Client TCP/IP

8. On the Network Properties Window, click the OK button to save these new settings.

Note: Windows may ask you for the original Windows installation disk or additional files. Check for the files at c:\windows\options\cabs, or insert your Windows CD-ROM into your CDROM drive and check the correct file location, e.g., D:\win98, D:\win9x. (if D is the letter of your CD-ROM drive).

9. Windows may prompt you to restart the PC. If so, click the Yes button. If Windows does not prompt you to restart your computer, do so to insure your settings.

Obtain IP Settings from Your Wireless Barricade Router

Now that you have configured your computer to connect to your Router, it needs to obtain new network settings. By releasing old IP settings and renewing them with settings from the Wireless Barricade, you will also verify that you have configured your computer correctly.

1. Click Start/Run.
2. Type WINIPCFG and click OK.
3. From the drop-down menu, select your network card. Click Release and then Renew. Verify that your IP address is now 192.168.2.xxx, your Subnet Mask is 255.255.255.0 and your Default Gateway is 192.168. 2.1. These values confirm that the Wireless

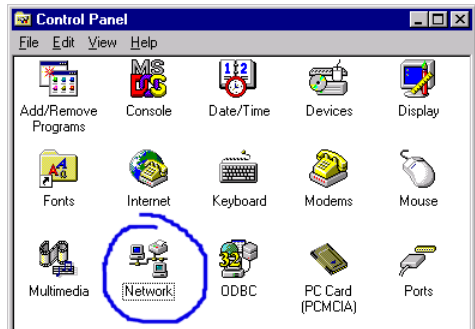

Setting Up TCP/IP

Barricade is functioning. Click OK to close the IP Configuration window.

Configuring Your Computer in Windows NT 4.0

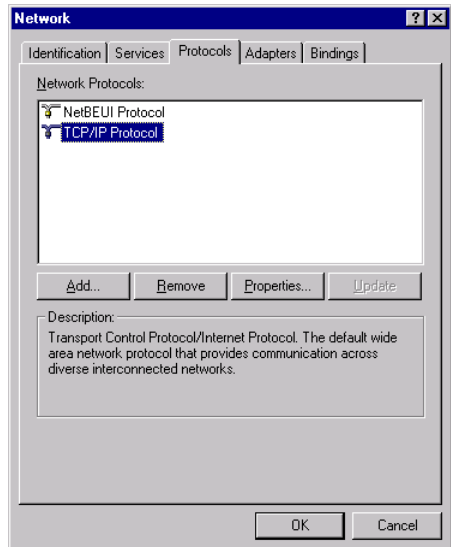

1. From the Windows desktop click Start/Settings/Control Panel.

2. Double-click the Network icon.

3. Click on the Protocols tab.

4. Double-click TCP/IP Protocol.

5. Click on the IP Address tab.

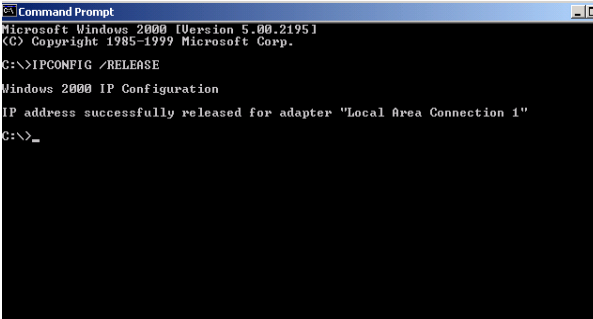

Configuring Client TCP/IP

6. In the Adapter drop-down list, be sure your Ethernet adapter is selected.
7. Click on "Obtain an IP address from a DHCP server".
8. Click OK to close the window.
9. Windows may copy files and will then prompt you to restart your system. Click Yes and your computer will shut down and restart.

Obtain IP Settings From Your Wireless Barricade Router

Now that you have configured your computer to connect to the Wireless Barricade, it needs to obtain new network settings. By releasing old IP settings and renewing them with settings from the Wireless Barricade, you will also verify that you have configured your computer correctly.

1. On the Windows desktop, click Start/Programs/Command Prompt.
2. In the Command Prompt window, type IPCONFIG /RELEASE and press the <ENTER> key.

```
Command Prompt
Microsoft Windows 2000 [Version 5.00.2195]
(C) Copyright 1985-1999 Microsoft Corp.

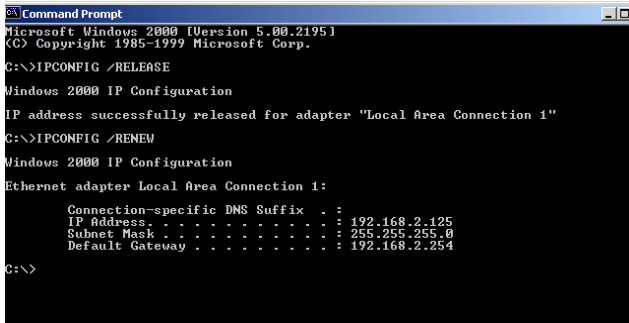

C:\>IPCONFIG /RELEASE

Windows 2000 IP Configuration

IP address successfully released for adapter "Local Area Connection 1"

C:\>_
```

3. Type `IPCONFIG /RENEW` and press the <ENTER> key. Verify that your IP Address is now 192.168.2.xxx, your Subnet Mask is 255.255.255.0 and your Default Gateway is 192.168.2.1. These values confirm that the Wireless Barricade is functioning.

```
Command Prompt
Microsoft Windows 2000 [Version 5.00.2195]
(C) Copyright 1985-1999 Microsoft Corp.

C:\>IPCONFIG /RELEASE

Windows 2000 IP Configuration

IP address successfully released for adapter "Local Area Connection 1"

C:\>IPCONFIG /RENEW

Windows 2000 IP Configuration

Ethernet adapter Local Area Connection 1:

    Connection-specific DNS Suffix  . : 
    IP Address. . . . .               : 192.168.2.125
    Subnet Mask . . . . .             : 255.255.255.0
    Default Gateway . . . . .         : 192.168.2.254

C:\>
```

4. Type `EXIT` and press <ENTER> to close the Command Prompt window.

Configuring Your Computer in Windows 2000

1. Access your Network settings by clicking Start, then choose Settings and then select Control Panel.
2. In the Control Panel, locate and double-click the Network and Dial-up Connections icon.

Configuring Client TCP/IP

3. Locate and double-click the Local Area Connection icon for the Ethernet adapter that is connected to the Wireless Barricade. When the Status dialog box window opens, click the Properties button.
4. In the Local Area Connection Properties box, verify the box next to Internet Protocol (TCP/IP) is checked. Then highlight the Internet Protocol (TCP/IP), and click the Properties button.
5. Select “Obtain an IP address automatically” to configure your computer for DHCP. Click the [OK] button to save this change and close the Properties window.
6. Click the OK button again to save these new changes.
7. Reboot your PC.
8. To obtain new network settings see “Obtain IP Settings from Your Wireless Barricade Router” on page 18.

Configuring Your Computer in Windows XP

The following instructions assume you are running Windows XP with the default interface. If you are using the Classic interface (where the icons and menus look like previous Windows versions), please follow the instructions for Windows 2000 outlined above.

1. Access your Network settings by clicking Start, choose Control Panel, select Network and Internet Connections and then click on the Network Connections icon.

Setting Up TCP/IP

2. Locate and double-click the Local Area Connection icon for the Ethernet adapter that is connected to the Wireless Barricade. Next, click the Properties button.

3. In the Local Area Connection Properties box, verify the box next to Internet Protocol (TCP/IP) is checked. Then highlight the Internet Protocol (TCP/IP), and click the Properties button.
4. Select “Obtain an IP address automatically” to configure your computer for DHCP. Click the OK button to save this change and close the Properties window.
5. Click the OK button again to save these new changes.
6. Reboot your PC.

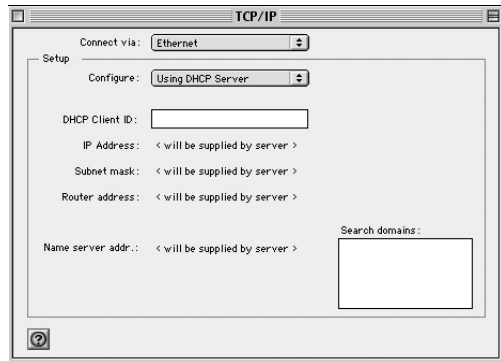

Configuring a Macintosh Computer

You may find that the instructions here do not exactly match your screen. This is because these steps and screenshots were created using Mac OS 8.5. Mac OS 7.x and above are all very similar, but may not be identical to Mac OS 8.5.

1. Pull down the Apple Menu. Click Control Panel and select TCP/IP.

Configuring Client TCP/IP

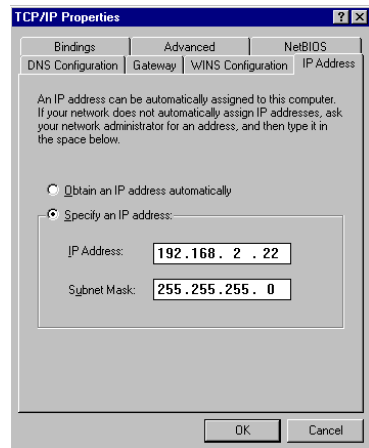

2. In the TCP/IP dialog box, make sure that Ethernet is selected in the Connect Via: field.
3. Select Using DHCP Server in the Configure field.

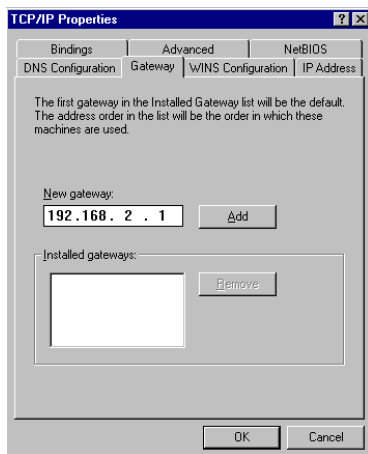

4. Close the TCP/IP dialog box.

Manual IP Configuration

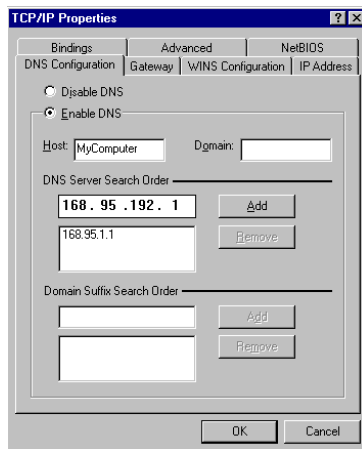

1. Check Specify an IP address on the IP Address tab. Enter an IP address based on the default network 192.168.2.x (where x is between 2 and 254), and use 255.255.255.0 for the subnet mask.

2. In the Gateway tab, add the IP address of the Wireless Barricade (default: 192.168.2.1) in the New gateway field and click Add.

3. On the DNS Configuration tab, add the IP address for the Wireless Barricade and click Add. This automatically relays DNS requests to the DNS server(s) provided by your ISP. Otherwise, add specific DNS servers into the DNS Server Search Order field and click Add.

4. After finishing TCP/IP setup, click OK, and then reboot the computer. After that, set up other PCs on the LAN according to the procedures described above.

Verifying Your TCP/IP Connection

After installing the TCP/IP communication protocols and configuring an IP address in the same network as the Wireless Barricade, use the Ping command to check if your computer has successfully connected to the Wireless Barricade. The following example shows how the Ping procedure can be executed in an MS-DOS window. First, execute the Ping command:

```
ping 192.168.2.1
```

If a message similar to the following appears:

```
Pinging 192.168.2.1 with 32 bytes of data:  
Reply from 192.168.2.1: bytes=32 time=2ms TTL=64
```

a communication link between your computer and the Wireless Barricade has been successfully established.

If you get the following message,

```
Pinging 192.168.2.1 with 32 bytes of data:  
Request timed out.
```

there may be something wrong in your installation procedure. Check the following items in sequence:

1. Is the Ethernet cable correctly connected between the Wireless Barricade and the computer?

The LAN LED on the Wireless Barricade and the Link LED of the network card on your computer must be on.

2. Is TCP/IP properly configured on your computer?

If the IP address of the Wireless Barricade is 192.168.2.1, the IP address of your PC must be from 192.168.2.2 - 192.168.2.254 and the default gateway must be 192.168.2.1.

If you can successfully Ping the Wireless Barricade you are now ready to connect to the Internet!

CONFIGURING THE WIRELESS BARRICADE ROUTER

The Wireless Barricade Router can be configured by any Java-supported browser including Internet Explorer 5.0 or above, or Netscape Navigator 4.0 or above. Using the Web management interface, you can configure the Wireless Barricade and view statistics to monitor network activity.

Note: Before you attempt to configure your router, if you have access to the Internet please visit www.smc.com or www.smc-europe.com and download the latest firmware update to insure your router is running the latest

Before you attempt to log into the Wireless Barricade's Web-based Administration, please verify the following.

1. Your browser is configured properly (see below).
2. Disable any firewall or security software that may be running.
3. Confirm that you have a good link LED where your computer is plugged into the Wireless Barricade. If you don't have a link light – then try another cable until you get a good link.

Browser Configuration

Confirm your browser is configured for a direct connection to the Internet using the Ethernet cable that is installed in the computer.

Configuring the Wireless Barricade Router

This is configured through the options/preference section of your browser.

Disable Proxy Connection

You will also need to verify that the HTTP Proxy feature of your web browser is disabled. This is so that your web browser will be able to view the Wireless Barricade configuration pages. The following steps are for Internet Explorer and for Netscape. Determine which browser you use and follow the appropriate steps.

Internet Explorer (5 or above)

1. Open Internet Explorer. Click Tools, and then select Internet Options.
2. In the Internet Options window, click the Connections tab.
3. Click the LAN Settings button.
4. Clear all the check boxes and click OK to save these LAN settings changes.
5. Click OK again to close the Internet Options window.

Internet Explorer (For Macintosh)

1. Open Internet Explorer. Click Edit/Preferences.
2. In the Internet Explorer Preferences window, under Network, select Proxies.
3. Uncheck all checkboxes and click OK.

Netscape (4 or above)

1. Open Netscape. Click Edit, and then select Preferences.
2. In the Preferences window, under Category, double-click Advanced, then select the Proxies option.
3. Check "Direct connection to the Internet."
4. Click the OK button to save the changes.

To access the Wireless Barricade's management interface, enter the Wireless Barricade IP address in your Web browser <http://192.168.2.1>. Then click LOGIN. (By default, there is no password.)

The home page displays the Setup Wizard and Advanced Setup options.

Navigating the Web Browser Interface

The Wireless Barricade's management interface features a Setup Wizard and an Advanced Setup section. Use the Setup Wizard if you want to quickly set up the Wireless Barricade for use with a cable modem or DSL modem.

Advanced setup supports more advanced functions like hacker attack detection, IP and MAC address filtering, intrusion detection, virtual server setup, virtual DMZ hosts, and other advanced functions.

Making Configuration Changes

Configurable parameters have a dialog box or a drop-down list. Once a configuration change has been made on a page, be sure to click the APPLY or NEXT button at the bottom of the page to enable the new setting.

Note: To ensure proper screen refresh after a command entry, ensure that Internet Explorer 5.0 is configured as follows: Under the menu Tools/Internet Options/General/Temporary Internet Files/Settings, the setting for "Check for newer versions of stored pages" should be "Every visit to the page."

Setup Wizard

Time Zone

Click on the Setup Wizard picture. The first item in the Setup Wizard is Time Zone setup.

For accurate timing of client filtering and log events, you need to set the time zone. Select your time zone from the drop-down list, and click NEXT.

Broadband Type

Select the type of broadband connection you have.

For a cable modem connection see the following page. For a Fixed-IP xDSL connection see “Fixed-IP xDSL” on page 33, for a PPPoE xDSL connection, see “PPPoE xDSL” on page 33, and for BigPond connection, see “BigPond” on page 35.

Configuring the Wireless Barricade Router

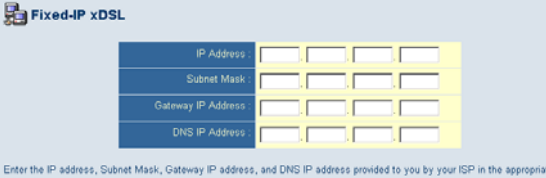

Cable Modem

The screenshot shows the 'Cable Modem' configuration screen. It features a 'Host Name' text input field and a 'MAC Address' section. The MAC Address is represented by six boxes containing the characters '00', '04', 'a2', '7a', 'c5', and 'a5', separated by hyphens. Below these boxes is a 'Clone MAC Address' button. A note at the bottom states: 'A cable modem requires minimal configuration. If the ISP requires you to input a Host Name, type it in the "Host Name" field above.'

Your ISP may have given you a host name. If so, enter it into the field.

Click Finish to complete the setup. The Status page will open to allow you to view the connection status, as well as other information. See “Status” on page 66 for details.

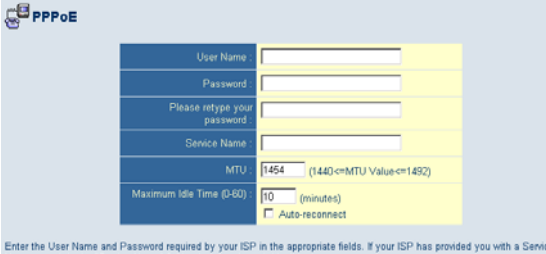

Fixed-IP xDSL

The screenshot shows the 'Fixed-IP xDSL' configuration window. It has a title bar with a computer icon and the text 'Fixed-IP xDSL'. Below the title bar is a table with four rows: 'IP Address', 'Subnet Mask', 'Gateway IP Address', and 'DNS IP Address'. Each row has five input fields. Below the table is a small text box that reads: 'Enter the IP address, Subnet Mask, Gateway IP address, and DNS IP address provided to you by your ISP in the appropriate fields above.'

Some xDSL Internet Service Providers may assign a fixed (static) IP address. If you have been provided with this information, choose this option and enter the assigned IP address, gateway IP address, DNS IP addresses, and subnet mask. Click FINISH to complete the setup.

PPPoE xDSL

The screenshot shows the 'PPPoE' configuration window. It has a title bar with a computer icon and the text 'PPPoE'. Below the title bar is a table with five rows: 'User Name', 'Password', 'Please retype your password', 'Service Name', and 'MTU'. The 'MTU' row has a text input field with '1454' and a note '(1440 <= MTU Value <= 1492)'. Below the table is a small text box that reads: 'Enter the User Name and Password required by your ISP in the appropriate fields. If your ISP has provided you with a Service Name enter it in the "Service Name" field, otherwise, leave it blank.'

Enter the PPPoE User Name and Password assigned by your Service Provider. The Service Name is normally optional, but may be required by some service providers.

Leave the Maximum Transmission Unit (MTU) at the default value (1454) unless you have a particular reason to change it.

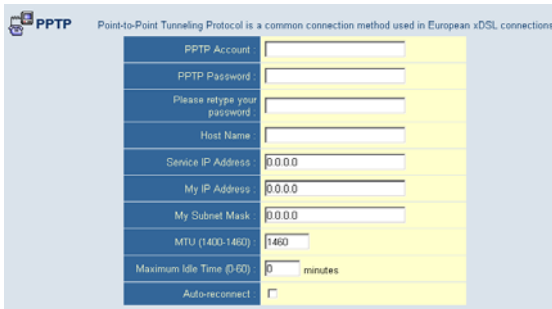

Enter a Maximum Idle Time (in minutes) to define a maximum period of time for which the Internet connection is maintained

Configuring the Wireless Barricade Router

during inactivity. If the connection is inactive for longer than the Maximum Idle Time, it will be dropped. (Default: 10)

Enable the Auto-reconnect option to automatically re-establish the connection as soon as you attempt to access the Internet again. Click FINISH to complete the setup.

PPTP (Point-to-Point Tunneling Protocol)

Point-to-Point Tunneling Protocol is a common connection method used in European xDSL connections.

PPTP Account	<input type="text"/>
PPTP Password	<input type="password"/>
Please retype your password	<input type="password"/>
Host Name	<input type="text"/>
Service IP Address	<input type="text" value="0.0.0.0"/>
My IP Address	<input type="text" value="0.0.0.0"/>
My Subnet Mask	<input type="text" value="0.0.0.0"/>
MTU (1400-1460)	<input type="text" value="1460"/>
Maximum Idle Time (0-60)	<input type="text" value="0"/> minutes
Auto-reconnect	<input type="checkbox"/>

Point-to-Point Tunneling Protocol is a common connection method used for xDSL connections in Europe. It can be used to join different physical networks using the Internet as an intermediary.

If you have been provided with the information as shown on the screen, enter the assigned IP address, subnet mask, default gateway IP address, user ID and password, and PPTP Gateway.

The MTU (Maximum Transmission Unit) governs the maximum size of the data packets. Leave this on the default value (1460) unless you have a particular reason to change it.

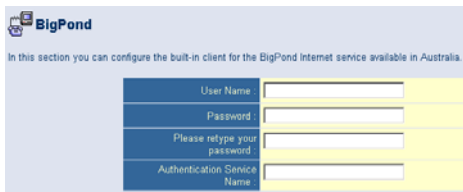

Enter a Maximum Idle Time (in minutes) to define a maximum period of time for which the Internet connection is maintained during inactivity. If the connection is inactive for longer than the Maximum Idle Time, it will be dropped. (Default: 0)

Note: Please be aware that the setting "Maximum Idle Time" to "0" and/or "Auto-Reconnect" enabled can cause increased telephone bills. For further information please visit www.smc-europe.com or contact SMC's technical support team.

Enable the Auto-reconnect option to automatically re-establish the connection as soon as you attempt to access the Internet again.

Click FINISH to complete the setup. (Refer to "Point-to-Point Tunneling Protocol (PPTP)" on page 42 for details.)

BigPond

The image shows a software window titled "BigPond" with a small icon on the left. Below the title bar, there is a line of text: "In this section you can configure the built-in client for the BigPond Internet service available in Australia." Below this text is a form with four rows, each with a label on the left and a text input field on the right. The labels are "User Name", "Password", "Please retype your password", and "Authentication Service Name". The input fields are empty and have a yellow background. The form is set against a light blue background.

User Name	<input type="text"/>
Password	<input type="password"/>
Please retype your password	<input type="password"/>
Authentication Service Name	<input type="text"/>

If you use the BigPond Internet Service which is available in Australia, enter the the user name, password and service name for BigPond authentication. Click FINISH to complete the setup.

Advanced Setup

Use the Web management interface to define system parameters, manage and control the Wireless Barricade and its ports, or monitor network conditions. The following table outlines the selections available from this program.

Menu	Description
System	Sets the local time zone, the password for administrator access, and the IP address of a PC that will be allowed to manage the Wireless Barricade remotely.
WAN	Specifies the Internet connection type: <ul style="list-style-type: none">• Dynamic IP host configuration and the physical MAC address of each media interface• PPPoE configuration• PPTP• Static IP and ISP gateway address• BigPond (Internet service available in Australia)• Specifies DNS servers to use for domain name resolution.
LAN	Sets the TCP/IP configuration of the Wireless Barricade's LAN interface and all DHCP clients.
Wireless	Configures the radio frequency, SSID, and encryption for wireless communications.
NAT	Shares a single ISP account with multiple users, sets up virtual servers.
Firewall	Configures a variety of security and specialized functions, including: Access Control, Hacker Prevention, and DMZ.
DDNS	Dynamic DNS provides users on the Internet with a method to tie their domain name(s) to computers or servers.
UPnP	With Universal Plug and Play, a device can automatically dynamically join a network, obtain an IP address, communicate its capabilities, and learn about the presence and capabilities of other devices. Devices can then directly communicate with each other. This further enables peer to peer networking.
Tools	Contains options to backup & restore the current configuration, restore all configuration settings to the factory defaults, update system firmware, or reset the system.

Menu	Description
Status	<p>Provides WAN connection type and status, firmware and hardware version numbers, system IP settings, as well as DHCP, NAT, and Firewall information.</p> <p>Displays the number of attached clients, the firmware versions, the physical MAC address for each media interface, and the hardware version and serial number.</p> <p>Shows the security and DHCP client log.</p>

System

Time Zone

The screenshot shows the 'Advanced Setup' interface for SMC Networks. On the left is a navigation menu with options: System (selected), Password Settings, Remote Management, WAN, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. The main content area is titled 'Time Zone' and includes the following elements:

- A heading 'Time Zone' followed by the instruction: 'Set the time zone of the Wireless Barricade. This information is used for log entries and client filtering.'
- A section 'Set Time Zone' with a dropdown menu currently showing '(GMT-04:00) Atlantic Time (Canada)'.
- A section 'Configure Time Server (NTP):' with the text: 'You can automatically maintain the system time on your SMC Barricade by synchronizing with a public time server over the Internet.'
- A checkbox labeled 'Enable Automatic Time Server Maintenance' which is checked.
- Instructions: 'When you enable this option you will need to configure two different time servers, use the options below to set the primary and secondary NTP servers in your area.'
- Fields for 'Primary Server:' (132.163.4.102 - North America) and 'Secondary Server:' (192.5.41.41 - North America), both with dropdown arrows.
- At the bottom right are three circular buttons: 'HELP', 'APPLY', and 'CANCEL'.

Select your time zone and time server from the drop-down list for the Wireless Barricade. This information is used for log entries and client access control.

Configuring the Wireless Barricade Router

Password Settings

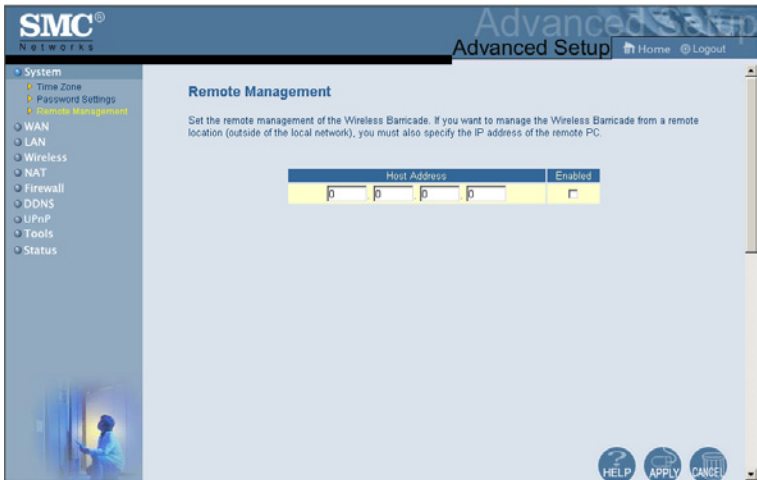

Use this menu to restrict access based on a password. By default, there is no password. For security you should assign one before exposing the Wireless Barricade to the Internet.

Passwords can contain from 3–12 alphanumeric characters and are not case sensitive.

Note: If your password is lost, or you cannot gain access to the user interface, press the Reset button on the front panel (holding it down for at least five seconds) to restore the factory defaults. (The default is no password.)

Enter a maximum Idle Time Out (in minutes) to define a maximum period of time for which the login session is maintained during inactivity. If the connection is inactive for longer than the maximum idle time, it will perform system logout, and you have to login to the Web management system again.
(Default: 9 minutes)

Remote Management

Remote Management allows a remote PC to configure, manage, and monitor the Wireless Barricade using a standard Web browser. Check Enable and enter the IP address of the remote host. Click APPLY.

Note: If you specify 0.0.0.0 as this IP address, any host can manage the Wireless Barricade.

WAN

Specify the WAN connection type provided by your Internet Service Provider, then click More Configuration to enter detailed configuration parameters for the selected connection type.

Configuring the Wireless Barricade Router

Dynamic IP

The screenshot shows the SMC® Advanced Setup web interface. The left sidebar contains a navigation menu with the following items: System, WAN (selected), PPTP, Static IP, BigPond, DNS, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. The main content area is titled "Dynamic IP". It contains the following text: "The Host name is optional, but may be required by some Service Provider's. The default MAC address is set to the WAN's physical interface on the Wireless Barricade." followed by "If required by your Service Provider, you use the 'Clone MAC Address' button to copy the MAC address of the Network Interface Card installed in your PC to replace the WAN MAC address." and "If necessary, you can use the 'Release' and 'Renew' buttons on the Status page to release and renew the WAN IP address." Below this text is a form with a "Host Name" text input field and a "MAC Address" section. The MAC Address section consists of six dropdown menus showing the values 00, 04, e2, 7a, 25, and 45 respectively, with a "Clone MAC Address" button to the right. At the bottom right of the page are three circular buttons labeled HELP, APPLY, and CANCEL.

The Host Name is optional, but may be required by some ISPs. The default MAC address is set to the WAN's physical interface on the Wireless Barricade. Use this address when registering for Internet service, and do not change it unless required by your ISP. If your ISP used the MAC address of an Ethernet card as an identifier when first setting up your broadband account, only connect the PC with the registered MAC address to the Wireless Barricade and click the Clone MAC Address button. This will replace the current Router MAC address with the already registered Ethernet card MAC address.

If you are unsure of which PC was originally set up by the broadband technician, call your ISP and request that they register a new MAC address for your account. Register the default MAC address of the Wireless Barricade.

Point-to-Point Over Ethernet (PPPoE)

The screenshot shows the SMC Networks Advanced Setup window. On the left is a navigation tree with categories: System, WAN, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. The WAN category is expanded, showing sub-options: Dynamic IP, PPPoE (selected), Static IP, BigPond, and DNS. The main content area is titled 'PPPoE' and contains a text block explaining the configuration: 'Enter the PPPoE user name and password assigned by your Service Provider. The Service Name is normally optional, but may be required by some service providers. Enter a Maximum Idle Time (in minutes) to define a maximum period of time for which the Internet connection is maintained during inactivity. If the connection is inactive for longer than the Maximum Idle Time, then it will be dropped. You can enable the Auto-reconnect option to automatically re-establish the connection as soon as you attempt to access the Internet again. If your Internet Service Provider requires the use of PPPoE, enter the information below.'

Below the text is a form with the following fields:

User Name	<input type="text"/>
Password	<input type="password"/>
Please retype your password	<input type="password"/>
Service Name	<input type="text"/>
MTU	1454 (1440 <= MTU Value <= 1492)
Maximum Idle Time (0-60)	10 (minutes)
	<input type="checkbox"/> Auto-reconnect

At the bottom right of the window are three buttons: HELP, APPLY, and CANCEL.

Enter the PPPoE User Name and Password assigned by your Service Provider. The Service Name is normally optional, but may be required by some service providers.

The MTU (Maximum Transmission Unit) governs the maximum size of the data packets. Leave this on the default value (1454) unless you have a particular reason to change it.

Enter a Maximum Idle Time (in minutes) to define a maximum period of time for which the Internet connection is maintained during inactivity. If the connection is inactive for longer than the Maximum Idle Time, it will be dropped. (Default: 10 minutes)

Enable the Auto-reconnect option to automatically re-establish the connection as soon as you attempt to access the Internet again.

Note: Please be aware that the setting "Maximum Idle Time" to "0" and/or "Auto-Reconnect" enabled can cause increased telephone bills. For further information

Configuring the Wireless Barricade Router

please visit www.smc-europe.com or contact SMC's technical support team.

Point-to-Point Tunneling Protocol (PPTP)

The screenshot shows the SMC Advanced Setup web interface. On the left is a navigation menu with categories: System, WAN, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. The WAN category is expanded, showing options: Dynamic IP, PPTP, Static IP, DigPond, and DNS. The PPTP option is selected. The main content area is titled 'PPTP' and includes a description: 'Point-to-Point Tunneling Protocol is a common connection method used in European xDSL connections.' Below this is a configuration table with the following fields:

PPTP Account	<input type="text"/>
PPTP Password	<input type="password"/>
Please retype your password	<input type="password"/>
Host Name	<input type="text"/>
Service IP Address	<input type="text" value="0.0.0.0"/>
My IP Address	<input type="text" value="0.0.0.0"/>
My Subnet Mask	<input type="text" value="0.0.0.0"/>
MTU (1400-1460)	<input type="text" value="1460"/>
Maximum Idle Time (0-60)	<input type="text" value="0"/> minutes
Auto-reconnect	<input type="checkbox"/>

At the bottom right of the interface are three buttons: HELP, APPLY, and CANCEL.

Point-to-Point Tunneling Protocol (PPTP) can be used to join different physical networks using the Internet as an intermediary. Using the above screen allows client PCs to establish a normal PPTP session and provides hassle-free configuration of the PPTP client on each client PC.

Enter the assigned IP address, subnet mask and default gateway IP address (usually supplied by your ISP), and then the PPTP User ID, Password and PPPTP Gateway IP address.

The MTU (Maximum Transmission Unit) governs the maximum size of the data packets. Leave this on the default value (1460) unless you have a particular reason to change it.

Enter a maximum Idle Time Out (in minutes) to define a maximum period of time for which the PPTP connection is

maintained during inactivity. If the connection is inactive for longer than the Maximum Idle Time, it will be dropped.
(Default: 10 minutes)

Note: Please be aware that the setting "Maximum Idle Time" to "0" and/or "Auto-Reconnect" enabled can cause increased telephone bills. For further information please visit www.smc-europe.com or contact SMC's technical support team.

Enable the Auto-reconnect option to automatically re-establish the connection as soon as you attempt to access the Internet again.

Static IP

The screenshot shows the SMC Networks Advanced Setup interface. On the left is a navigation tree with categories: System, WAN, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. The WAN category is expanded, showing sub-items: Dynamic IP, PPPoE, PPTP, Static IP (highlighted in yellow), and DNS. The main content area is titled 'Static IP' and contains the following text: 'If your Service Provider has assigned a fixed IP address, enter the assigned IP address, subnet mask and the gateway address provided.' and 'Has your Service Provider given you an IP address and Gateway address?'. Below this text is a form with three rows of input fields: 'IP address assigned by your Service Provider', 'Subnet Mask', and 'Service Provider Gateway Address'. Each row has four input boxes. At the bottom right of the window are three buttons: HELP, APPLY, and CANCEL.

If your Internet Service Provider has assigned a fixed IP address, enter the assigned address and subnet mask for the Wireless Barricade, then enter the gateway address of your ISP.

You may need a fixed address if you want to provide Internet services, such as a Web server or FTP server.

Configuring the Wireless Barricade Router

BigPond

The screenshot shows the SMC Networks Advanced Setup interface. On the left is a navigation menu with categories: System, WAN, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. Under the WAN category, options include Dynamic IP, PPPoE, PPTP, Static IP, and BigPond (which is highlighted in yellow). The main content area is titled 'BigPond' and contains the text: 'In this section you can configure the built-in client for the BigPond Internet service available in Australia.' Below this text is a form with four input fields, each with a label on the left and a yellow input box on the right:

User Name	<input type="text"/>
Password	<input type="password"/>
Please retype your password	<input type="password"/>
Authentication Service Name	<input type="text"/>

At the bottom right of the page are three circular icons labeled 'HELP', 'APPLY', and 'CANCEL'.

BigPond is a service provider in Australia that uses a heartbeat system to maintain the Internet connection. Configure the built-in client with your user name, password and service name to get online. Leave the Authentication Service Name as “login-server” for a universal configuration.

DNS

The screenshot shows the SMC Networks Advanced Setup interface. On the left is a navigation menu with categories: System, WAN, LAN, Wireless, NAT, Firewall, DDNS, UPnP, Tools, and Status. The WAN category is expanded, showing options like Dynamic IP, PPPoE, PPTP, Static IP, and BigPond. The main content area is titled 'DNS' and contains a descriptive paragraph about Domain Name Servers. Below the text are two input fields: 'Domain Name Server (DNS) Address' and 'Secondary DNS Address (optional)'. Each field is a yellow box divided into four segments for IP address entry. At the bottom right of the main area are three circular buttons: HELP, APPLY, and CANCEL.

SMC® Networks Advanced Setup Home Logout

DNS

A Domain Name Server (DNS) is an index of IP addresses and Web addresses. If you type a Web address into your browser, such as www.uccoln.com, a DNS server will find that name in its index and find the matching IP address: 64.147.25.20. Most ISPs provide a DNS server for speed and convenience. Since your Service Provider may connect to the Internet with dynamic IP settings, it is likely that the DNS server IP's are also provided dynamically. However, if there is a DNS server that you would rather use, you need to specify the IP address here.

Domain Name Server (DNS) Address	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
Secondary DNS Address (optional)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

HELP APPLY CANCEL

Domain Name Servers map numerical IP addresses to the equivalent domain name (e.g., www.smc.com). Your ISP should provide the IP address of one or more domain name servers. Enter those addresses in this screen.

Configuring the Wireless Barricade Router

LAN

SMC® Advanced Setup | Home | Logout

LAN Settings

You can enable DHCP to dynamically allocate IP addresses to your client PCs, or configure filtering functions based on specific clients or protocols. The Wireless Barricade must have an IP address for the local network.

LAN IP

IP Address: 192 168 2 1

IP Subnet Mask: 255 255 255 0

DHCP Server: ☒ Enabled ☐ Disabled

Lease Time: One week

IP Address Pool

Start IP: 192 168 2 100

End IP: 192 168 2 199

Domain Name: (optional)

- **LAN IP** – Use the LAN menu to configure the LAN IP address for the Wireless Barricade and to enable the DHCP server for dynamic client address allocation.
- **Lease Time** - Set a period for the lease time if required. For home networks this may be set to Forever, which means there is no time limit on the IP address lease.
- **IP Address Pool** – A dynamic IP start address may be specified by the user, e.g. 192.168.2.100 (default value). Once this start IP address has been assigned, IP addresses running from 192.168.2.100 to 192.168.2.199 will be part of the dynamic IP address pool. IP addresses from 192.168.2.2 to 192.168.2.99, and 192.168.2.200 to 192.168.2.254 will be available as static IP addresses.

Remember not to include the address of the Wireless Barricade in the client address pool. Also remember to configure your client PCs for dynamic IP address allocation.

Wireless

To configure the Wireless Barricade as a wireless access point for wireless clients (either stationary or roaming), all you need to do is define the radio channel, the Service Set identifier (SSID), and encryption options.

Channel and SSID

The screenshot shows the SMC Networks Advanced Setup web interface. On the left is a navigation menu with options: System, WAN, LAN, Wireless (selected), NAT, Firewall, DDNS, UPnP, Tools, and Status. The 'Wireless' section is expanded, showing 'Channel and SSID' and 'Encryption'. The main content area is titled 'Channel and SSID' and contains a descriptive paragraph: 'This page allows you to define SSID, Transmission Rate, Basic Rate and Channel ID for wireless connection. In the wireless environment, this Wireless Barricade can be acting as an wireless access point. These parameters are used for the mobile stations to connect to this access point.' Below the text is a configuration form with the following fields: SSID (text box with 'SMC'), Transmission Rate (dropdown menu with 'Fully Automatic'), Basic Rate (dropdown menu with '2Mbps'), Channel (dropdown menu with '6'), and Broadcast SSID (radio buttons for 'Enable' and 'Disable', with 'Enable' selected). At the bottom right of the interface are three circular buttons: HELP, APPLY, and CANCEL.

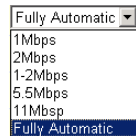

You must specify a common radio channel and SSID (Service Set ID) to be used by the Wireless Barricade and all of your wireless clients. Be sure you configure all of your clients to the same values.

ESSID: The Service Set ID. This should be set to the same value as other wireless devices in your network. (Default: SMC.)

Note: The SSID is case sensitive and can consist of up to 32 alphanumeric characters.

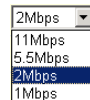

Configuring the Wireless Barricade Router

Transmission Rate: Set the data rate transmitted from the Wireless Barricade. The lower the data rate, the longer the transmission distance.
(Default: Fully Automatic.)

A dropdown menu for Transmission Rate. The list includes: Fully Automatic (selected), 1Mbps, 2Mbps, 1-2Mbps, 5.5Mbps, 11Mbps, and Fully Automatic (highlighted at the bottom).

Basic Rate: The highest rate specified is the rate the Wireless Barricade will use when transmitting broadcast/multicast and management frames. Available options are: 1, 2, 5.5, and 11Mbps.
(Default: 2Mbps.)

A dropdown menu for Basic Rate. The list includes: 2Mbps (selected), 11Mbps, 5.5Mbps, 2Mbps (highlighted), and 1Mbps.

Channel: The radio channel through which the Wireless Barricade communicates with PCs in its BSS. (Default: 6)

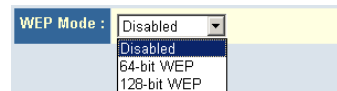

A dropdown menu for Channel. The list includes: Auto (selected), Auto (highlighted), 1, 2, 3, 4, 5, 6, 7, 8, 9, and 10.

Note: The available channel settings are limited by local regulations.

Broadcast SSID: Broadcasting the SSID on the wireless network for easy connection with client PCs.
(Default: Enable)

Encryption

If you are transmitting sensitive data across wireless channels, you should enable Wired Equivalent Privacy (WEP)

A dropdown menu for WEP Mode. The list includes: Disabled (selected), Disabled (highlighted), 64-bit WEP, and 128-bit WEP.

encryption. Encryption requires you to use the same set of encryption/decryption keys for the Wireless Barricade and all of your wireless clients. You can choose between standard 64-bit or the more robust 128-bit encryption.

Advanced Setup

You may automatically generate encryption keys or manually enter the keys. For automatic 64-bit security, enter a passphrase and click Generate. Four keys will be generated (as shown below). Choose a key from the drop-down list or accept the default key. Automatic 128-bit security generates a single key. Automatic 256-bit security generates two keys.

Configuring the Wireless Barricade Router

If you use encryption, configure the same keys used for the Wireless Barricade on each of your wireless clients. Note that Wired Equivalent Privacy (WEP) protects data transmitted between wireless nodes, but does not protect any transmissions over your wired network or over the Internet.

Network Address Translation (NAT)

From this section you can configure the Address Mapping, Virtual Server, and Special Application features that provide control over the port openings in the Wireless Barricade's firewall. This section can be used to support several Internet based applications such as VPN

Address Mapping

The screenshot shows the SMC Networks Advanced Setup web interface. The left sidebar contains a navigation menu with the following items: System, WAN, LAN, Wireless, NAT (selected), Virtual Server, Special Application, Firewall, DDNS, UPnP, Tools, and Status. The main content area is titled "Address Mapping" and includes a descriptive paragraph about NAT. Below the text is a table with 6 rows for configuring address mappings. Each row contains a "Global IP" field, a description, and a "from" field with a range of internal IP addresses.

Address Mapping

Network Address Translation (NAT) allows IP addresses used in a private local network to be mapped to one or more addresses used in the public, global Internet. This feature limits the number of public IP addresses required from the ISP and also maintains the privacy and security of the local network. We allow one or more than one public IP address to be mapped to a pool of local addresses.

Address Mapping	
1. Global IP: 0.0.0.0	is transformed as multiple virtual IPs from 192.168.2.0 to 192.168.2.0
2. Global IP: 0.0.0.0	is transformed as multiple virtual IPs from 192.168.2.0 to 192.168.2.0
3. Global IP: 0.0.0.0	is transformed as multiple virtual IPs from 192.168.2.0 to 192.168.2.0
4. Global IP: 0.0.0.0	is transformed as multiple virtual IPs from 192.168.2.0 to 192.168.2.0
5. Global IP: 0.0.0.0	is transformed as multiple virtual IPs from 192.168.2.0 to 192.168.2.0
6. Global IP: 0.0.0.0	is transformed as multiple virtual IPs

Allows one or more public IP addresses to be shared by multiple internal users. Enter the Public IP address you wish to share into the Global IP field. Enter a range of internal IPs that will share the global IP.

Virtual Server

Virtual Server

You can configure the Wireless Barricade as a virtual server so that remote users accessing services such as the Web or FTP at your local site via public IP addresses can be automatically redirected to local servers configured with private IP addresses. In other words, depending on the requested service (TCP/UDP port number), the Wireless Barricade redirects the external service request to the appropriate server (located at another internal IP address).

	Private IP	Service Port	Type	Enabled
1.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
2.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
3.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
4.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
5.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
6.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
7.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
8.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
9.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>
10.	192.168.2. <input type="text"/>	<input type="text"/>	TCP	<input type="checkbox"/>

If you configure the Wireless Barricade as a virtual server, remote users accessing services such as Web or FTP at your local site via public IP addresses can be automatically redirected to local servers configured with private IP addresses. In other words, depending on the requested service (TCP/UDP port number), the Wireless Barricade redirects the external service request to the appropriate server (located at another internal IP address).

For example, if you set Type/Public Port to TCP/80 (HTTP or Web) and the Private IP/Port to 192.168.2.2/80, then all HTTP requests from outside users will be transferred to 192.168.2.2 on port 80. Therefore, by just entering the IP Address provided by the ISP, Internet users can access the service they need at the local address to which you redirect them.

The more common TCP service ports include:

HTTP: 80, FTP: 21, Telnet: 23, and POP3: 110.

Configuring the Wireless Barricade Router

Special Applications

Some applications, such as Internet gaming, videoconferencing, Internet telephony and others, require multiple connections. These applications cannot work with Network Address Translation (NAT) enabled. If you need to run applications that require multiple connections, use the following screen to specify the additional public ports to be opened for each application.

SMC® Networks Advanced Setup | Home | Logout

Special Applications

Some applications require multiple connections, such as Internet gaming, video conferencing, Internet telephony and others. These applications cannot work when Network Address Translation (NAT) is enabled. If you need to run applications that require multiple connections, specify the port normally associated with an application in the "Trigger Port" field, select the protocol type as TCP or UDP, then enter the public ports associated with the trigger port to open them for inbound traffic.

Note: The range of the Trigger Ports is from 0 to 65535.

	Trigger Port	Trigger Type	Public Port	Public Type	Enabled
1.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
2.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
3.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
4.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
5.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
6.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
7.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
8.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>
9.	<input type="text"/>	TCP	<input type="text"/>	TCP	<input type="checkbox"/>

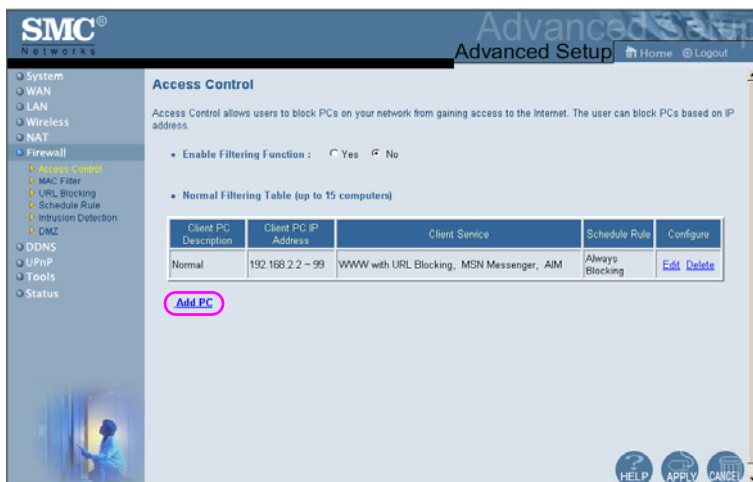

Specify the public port number normally associated with an application in the Trigger Port field. Set the protocol type to TCP or UDP, then enter the ports that the application requires. The ports may be in the format 7, 11, 57, or in a range, e.g., 72-96, or a combination of both, e.g., 7, 11, 57, 72-96.

For a full list of ports and the services that run on them, see www.iana.org/assignments/port-numbers.

Firewall

The Wireless Barricade firewall can provide access control of connected client PCs, block common hacker attacks, including IP Spoofing, Land Attack, Ping of Death, IP with zero length, Smurf Attack, UDP port loopback, Snork Attack, TCP null scan, and TCP SYN flooding. The firewall does not significantly affect system performance, so we advise leaving it enabled to protect your network users.

Access Control

The screenshot shows the SMC Networks Advanced Setup interface. On the left is a navigation menu with options: System, WAN, LAN, Wireless, NAT, Firewall (selected), DDNS, UPnP, Tools, and Status. The Firewall section is expanded, showing sub-options: Wireless Firewall, MAC Filter, URL Blocking, Schedule Rule, Intrusion Detection, and DMZ. The main content area is titled 'Access Control' and includes a description: 'Access Control allows users to block PCs on your network from gaining access to the Internet. The user can block PCs based on IP address.' Below this, there is a section for 'Enable Filtering Function' with radio buttons for 'Yes' and 'No' (selected). A note indicates 'Normal Filtering Table (up to 15 computers)'. A table with the following data is displayed:

Client PC Description	Client PC IP Address	Client Service	Schedule Rule	Configure
Normal	192.168.2.2 ~ 99	WWW with URL Blocking, MSN Messenger, AIM	Always Blocking	Edit Delete

Below the table is a button labeled 'Add PC'. At the bottom right of the interface are three circular buttons: 'HELP', 'APPLY', and 'CANCEL'.

Using this option allows you to specify different privileges based on IP address for the client PCs.

Configuring the Wireless Barricade Router

Note: Click on Add PC and define the appropriate settings for client PC services (as shown in the following screen).

Access Control Add PC

This page allows users to define service limitations of client PCs, including IP address, service type and scheduling rule criteria. For the URL blocking function, you need to configure the URL address first on the "URL Blocking Site" page. For the scheduling function, you also need to configure the schedule rule first on the "Schedule Rule" page.

- Client PC Description: Normal
- Client PC IP Address: 192.168.2.0 - 255
- Client PC Service:

Service Name	Detail Description	Blocking
WWW	HTTP, TCP Port 80, 3128, 8080, 8081	<input type="checkbox"/>
WWW with URL Blocking	HTTP (Ref. URL Blocking Site Page)	<input checked="" type="checkbox"/>
E-mail Sending	SMTP, TCP Port 25	<input type="checkbox"/>
News Forums	NNTP, TCP Port 119	<input type="checkbox"/>
E-mail Receiving	POP3, TCP Port 110	<input type="checkbox"/>
Secure HTTP	HTTPS, TCP Port 443	<input type="checkbox"/>
File Transfer	FTP, TCP Port 21	<input type="checkbox"/>
MSN Messenger	TCP Port 1863	<input checked="" type="checkbox"/>
Telnet Service	TCP Port 23	<input type="checkbox"/>
AIM	AOL Instant Messenger, TCP Port 5190	<input checked="" type="checkbox"/>
NetMeeting	H.323, TCP Port 1720	<input type="checkbox"/>
DNS	UDP Port 53	<input type="checkbox"/>
SNMP	UDP Port 161, 162	<input type="checkbox"/>
VPN-PPPTP	TCP Port 1723	<input type="checkbox"/>
VPN-L2TP	UDP Port 1701	<input type="checkbox"/>

MAC Filtering Table

This section helps provides MAC Filter configuration. When enabled, only MAC addresses configured will have access to your network. All other client devices will get denied access. This security feature can support up to 32 devices and applies to clients.

- MAC Address Control : ☐ Yes ☒ No
- MAC Filtering Table (up to 32 computers)

ID	Client PC MAC Address					
1	:	:	:	:	:	:
2	:	:	:	:	:	:
3	:	:	:	:	:	:
4	:	:	:	:	:	:
5	:	:	:	:	:	:
6	:	:	:	:	:	:
7	:	:	:	:	:	:
8	:	:	:	:	:	:
9	:	:	:	:	:	:
10	:	:	:	:	:	:
11	:	:	:	:	:	:
12	:	:	:	:	:	:

The MAC Filtering feature of the Wireless Barricade allows you to control access to your network to up to 32 clients based on the MAC (Media Access Control) Address of the client machine. This ID is unique to each network adapter. If the MAC address is listed in the table, that client machine will have access to the network.

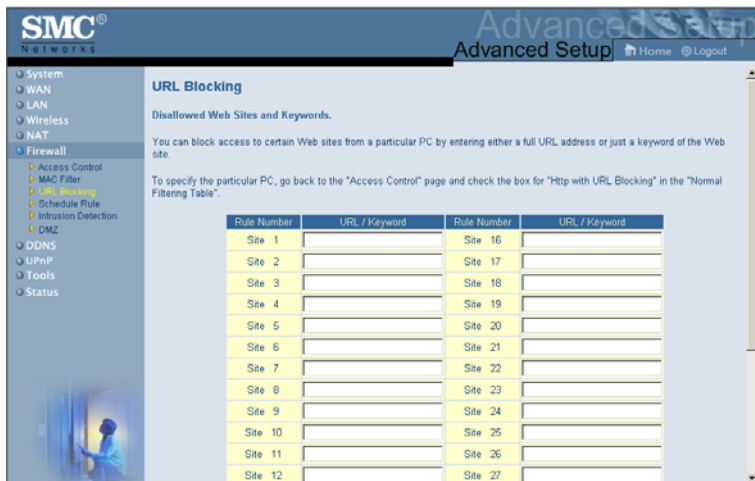

Configuring the Wireless Barricade Router

URL Blocking

To configure the URL Blocking feature, use the table below to specify the websites (www.somesite.com) and/or keywords you want to filter on your network.

To complete this configuration, you will need to create or modify an access rule in “Access Control” on page 53. To modify an existing rule, click the Edit option next to the rule you want to modify. To create a new rule, click on the Add PC option.

From the Access Control Add PC section check the option for WWW with URL Blocking in the Client PC Service table to filter out the websites and keywords specified below.

URL Blocking

Disallowed Web Sites and Keywords.

You can block access to certain Web sites from a particular PC by entering either a full URL address or just a keyword of the Web site.

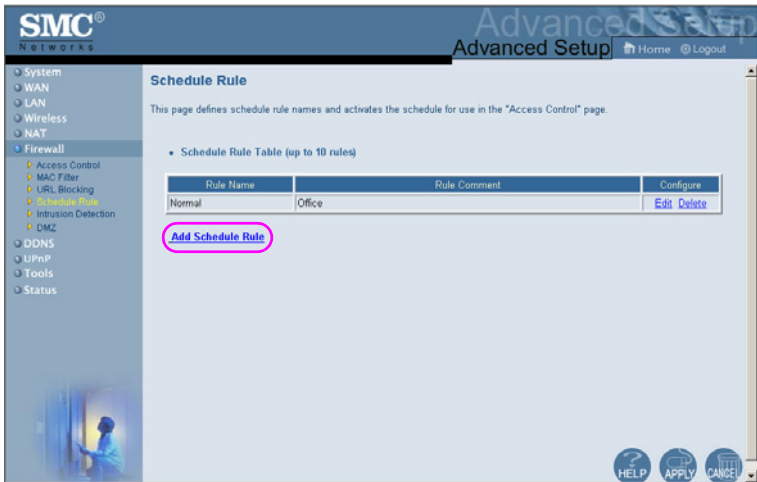

To specify the particular PC, go back to the "Access Control" page and check the box for "Http with URL Blocking" in the "Normal Filtering Table".

Rule Number	URL / Keyword	Rule Number	URL / Keyword
Site 1		Site 16	
Site 2		Site 17	
Site 3		Site 18	
Site 4		Site 19	
Site 5		Site 20	
Site 6		Site 21	
Site 7		Site 22	
Site 8		Site 23	
Site 9		Site 24	
Site 10		Site 25	
Site 11		Site 26	
Site 12		Site 27	

Use the above screen to block access to Web sites or to Web URLs containing the keyword specified in the table.

Schedule Rule

The Schedule Rule feature allows you to configure specific rules based on Time and Date. These rules can then be used to configure more specific Access Control.

Enables Schedule-based Internet access control.

1. Click Add Schedule Rule.
2. Define the settings for the schedule rule (as shown on the following screen).
3. Click OK and then click the APPLY button to save your settings.

Configuring the Wireless Barricade Router

The screenshot shows the 'Edit Schedule Rule' page in the SMC Networks Advanced Setup interface. The left sidebar contains a navigation menu with options: System, WAN, LAN, Wireless, NAT, Firewall (selected), Access Control, MAC Filter, URL Blocking, Schedule Rule, Intrusion Detection, DMZ, DDNS, UPnP, Tools, and Status. The main content area is titled 'Edit Schedule Rule' and includes instructions on how to create network schedule rules. It provides a text area for the 'Schedule Rule Name', a text area for the 'Schedule Rule Comment/Desc.' with an example '(ex. 10:30AM - 7:45PM)', and a display for the 'Current Router Time' as 'Wed Apr 30 05:25:17 2003'. Below these fields is a table for configuring the schedule rule.

Week Day	Start Time (hh:mm)	End Time (hh:mm)
Every Day	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM
Sunday	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM
Monday	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM
Tuesday	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM
Wednesday	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM
Thursday	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM
Friday	<input type="text"/> : <input type="text"/> AM	<input type="text"/> : <input type="text"/> AM

Use this section to create your network schedule rules.

The times you set below are the times periods that you want the Access Control Rule to be active. For example, if you want to block Internet access (block WWW) from 9AM to 9PM during the week. Simply configure 9:00 AM as “Start Time” and 9:00 PM as “End Time” for each weekday - during that time period the user will be unable to access the internet.

Once the schedule rule is setup, you will need to configure or edit an Access Control rule, and select your Schedule Rule that you want to apply to that Access Control rule. You can set the schedule rule at the bottom of the Access Control Configuration page in the “Scheduling Rule” drop-down option.

Intrusion Detection

The screenshot shows the SMC Networks Advanced Setup web interface. On the left is a navigation menu with options: System, WAN, LAN, Wireless, NAT, Firewall (selected), DMZ, DDNS, UPnP, Tools, and Status. The Firewall menu is expanded, showing sub-options: Access Control, MAC Filter, URL Blocking, Schedule Rule, and Intrusion Detection (highlighted in yellow). The main content area is titled 'Intrusion Detection' and includes a descriptive paragraph: 'When the SPI (Stateful Packet Inspection) firewall feature is enabled, all packets can be blocked. Stateful Packet Inspection (SPI) allows full support of different application types that are using dynamic port numbers.' Below this are two configuration sections. The 'FIREWALL CONFIGURATION' section has two rows: 'SPI and Anti-DoS firewall protection' with 'Enable' selected, and 'Discard Ping From WAN' with 'Enable' selected. The 'E-MAIL ALERT CONFIGURATION' section has four input fields: 'Your E-mail Address', 'SMTP Server Address', 'User name', and 'Password'. At the bottom right are three buttons: 'HELP', 'APPLY', and 'CANCEL'.

Firewall Configuration

- **SPI (Stateful Packet Inspection) and Anti-DoS firewall protection (Default: Enabled)** – the Wireless Barricade's Intrusion Detection feature limits access for incoming traffic at the WAN port. When the SPI feature is turned on, all incoming packets will be blocked.
- **Discard Ping from WAN (Default: Enabled)**
 - Prevents a PING on the Wireless Barricade's WAN port from being routed to the network.

E-Mail Alert Configuration

- **When hackers attempt to enter your network, we can alert you by e-mail** – Enter your E-mail address. Specify your SMTP and POP3 servers, user name, and password.

Configuring the Wireless Barricade Router

DMZ (Demilitarized Zone)

The screenshot shows the SMC Advanced Setup web interface. On the left is a navigation menu with options: System, WAN, LAN, Wireless, NAT, Firewall (selected), Access Control, MAC Filter, URL Blocking, Schedule Rule, Intrusion Detection, DDNS, UPnP, Tools, and Status. The main content area is titled 'DMZ(Demilitarized Zone)'. It contains a paragraph explaining that if a local PC cannot run an Internet application properly from behind the NAT firewall, it can be opened up to unrestricted two-way Internet access by defining a Virtual DMZ Host. Below this, there is a section 'Enable DMZ:' with radio buttons for 'Yes' (selected) and 'No'. A note states: 'Multiple PCs can be exposed to the Internet for two-way communications e.g. Internet gaming, video conferencing, or VPN connections. To use the DMZ, you must set a static IP address for that PC.' There are two columns of input fields: 'Public IP Address' and 'Client PC IP Address'. The 'Public IP Address' column has 8 rows, with the first row containing the value '10.1.20.152' and the others empty. The 'Client PC IP Address' column has 8 rows, each containing the value '192.168.2.0'. At the bottom right are three buttons: 'HELP', 'APPLY', and 'CANCEL'.

SMC®
Networks

Advanced Setup | Home | Logout

DMZ(Demilitarized Zone)

If you have a local client PC that cannot run an Internet application properly from behind the NAT firewall, then you can open the client up to unrestricted two-way Internet access by defining a Virtual DMZ Host.

Enable DMZ: ☒ Yes ☐ No

Multiple PCs can be exposed to the Internet for two-way communications e.g. Internet gaming, video conferencing, or VPN connections. To use the DMZ, you must set a static IP address for that PC.

Public IP Address	Client PC IP Address
1. 10.1.20.152	192.168.2.0
2. [][][][]	192.168.2.0
3. [][][][]	192.168.2.0
4. [][][][]	192.168.2.0
5. [][][][]	192.168.2.0
6. [][][][]	192.168.2.0
7. [][][][]	192.168.2.0
8. [][][][]	192.168.2.0

HELP APPLY CANCEL

If you have a client PC that cannot run an Internet application properly from behind the firewall, then you can open the client up to unrestricted two-way Internet access. Enter the IP address of a DMZ host to this screen. Adding a client to the DMZ may expose your local network to a variety of security risks, so only use this option as a last resort.

DDNS (Dynamic DNS) Settings

Domain Name is a series of alphanumeric strings separated by periods, that is the address of a network connection and that identifies the owner of the address.

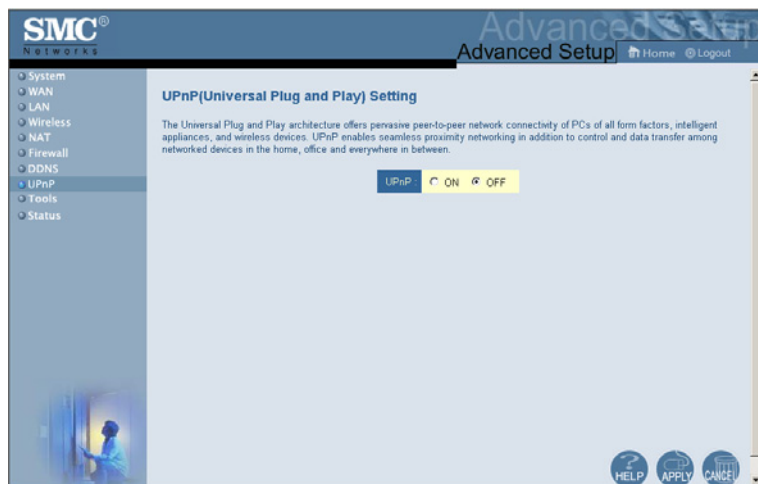

Dynamic DNS provides users on the Internet with a method to tie their domain name(s) to computers or servers. DDNS allows your domain name to follow your IP address automatically by having your DNS records changed when your IP address changes.

The Server Configuration section automatically opens the port options checked in the Virtual Server section. Simply enter in the IP Address of your server, such as a web server, and then click on the port option HTTP Port 80 so users can access your server from the WAN connection (Internet).

Configuring the Wireless Barricade Router

This DNS feature is powered by TZO.com. With a DDNS connection you can host your own web site, email server, FTP site, and more at your own location even if you have a dynamic IP address. (Default: Disable)

UPnP (Universal Plug and Play) Setting

Enable UPnP by checking ON in the screen above. UPnP allows the device to automatically:

- dynamically join a network
- obtain an IP address
- convey its capabilities and learn about the presence and capabilities of other devices.(Default: OFF)

Tools

Use the Tools menu to backup the current configuration, restore a previously saved configuration, restore factory settings, update firmware, and reset the Wireless Barricade.

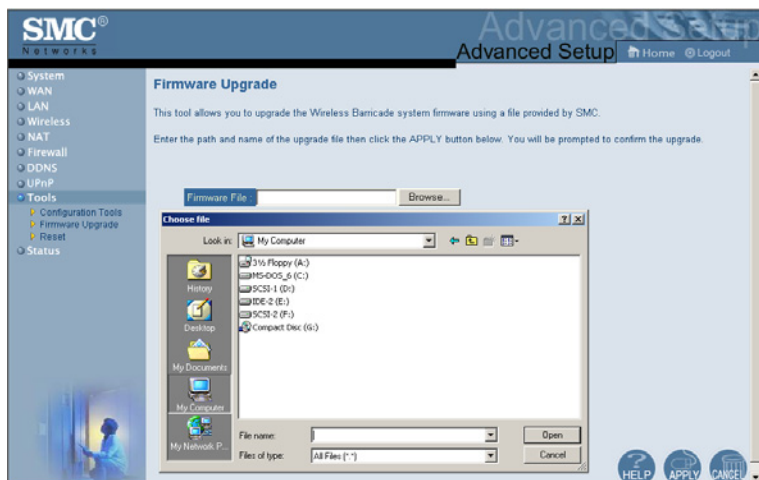

Tools - Configuration Tools

- Backup – saves the Wireless Barricade's configuration to a file.
- Restore – restores settings from a saved backup configuration file.
- Restore to factory defaults – restores the Wireless Barricade settings back to the factory default original.

Configuring the Wireless Barricade Router

Tools - Firmware Upgrade

Use this screen to update the firmware or user interface to the latest versions. Download the upgrade file from the SMC Web site (www.smc.com) and save it to your hard drive. In the Upgrade Target field, choose Firmware. Then click Browse to look for the previously downloaded file. Click APPLY. Check the Status page Information section to confirm that the upgrade process was successful.

Tools - Reset

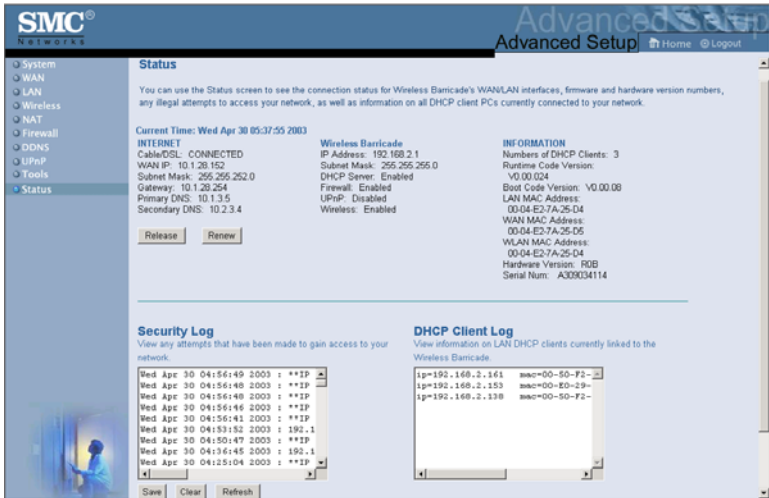

Click **APPLY** to reset the Wireless Barricade. The reset will be complete when the power LED stops blinking.

Note: If you use the Reset button on the front panel, the Wireless Barricade performs a power reset. If the button is held depressed for over five seconds, all the LEDs will illuminate and the factory settings will be restored.

Configuring the Wireless Barricade Router

Status

The Status screen displays WAN/LAN connection status, firmware, and hardware version numbers, illegal attempts to access your network, as well as information on DHCP clients connected to your network.

The following items are included on this screen:

Section	Description
INTERNET	Displays WAN connection type and status.
Wireless Barricade	Displays system IP settings, as well as DHCP, Firewall, UPnP and Wireless status.
INFORMATION	Displays the number of attached clients, the firmware versions, the physical MAC address for each media interface, as well as the hardware version and serial number.
Security Log	Displays illegal attempts to access your network.
Save	Click on this button to save the security log file.
Clear	Click on this button to delete the access log.
Refresh	Click on this button to refresh the screen.
DHCP Client Log	Displays information on all DHCP clients on your network.

TROUBLESHOOTING

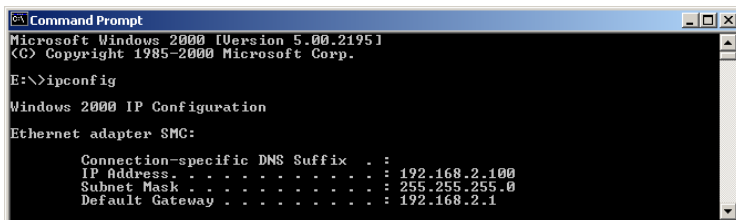

The information outlined in this section describes some useful steps for getting your computer and the Wireless Barricade Router online.

A. Verify your connection to the Wireless Barricade

If you are unable to access the Wireless Barricade's web-based administration pages then you may not be properly connected or configured. The screen shots in this section were taken on a Windows 2000 machine, but the same steps will apply to Windows 95/98/Me/XP.

To determine your TCP/IP configuration status please follow the steps below:

1. Click Start then choose Run.
2. Type cmd or command to open a DOS prompt.
3. In the DOS window, type ipconfig and verify the information that is displayed.
4. If your computer is setup for DHCP, then your TCP/IP configuration should be similar to the information displayed:
 - IP Address: 192.168.2.X (x is number between 100 and 199)
 - Subnet: 255.255.255.0
 - Gateway: 192.168.2.1

```
Command Prompt
Microsoft Windows 2000 [Version 5.00.2195]
(C) Copyright 1985-2000 Microsoft Corp.

E:\>ipconfig

Windows 2000 IP Configuration

Ethernet adapter SMC:

    Connection-specific DNS Suffix  . : 
    IP Address . . . . . : 192.168.2.100
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.2.1
```

If you have any other IP address information listed see below.

If you have an IP address that starts with 169.254.XXX.XXX then see the next section.

If you have another IP address configured, then see section C.

B. I am getting an IP Address that starts with 169.254.XXX.XXX

If you are getting this IP Address, then you need to check that you are properly connected to the Wireless Barricade.

Confirm that you have a good link light on the Wireless Barricade for the port this computer is connected to. If not, please try another cable.

If you have a good link light, please open up a DOS window as described in the previous section and type ipconfig/renew.

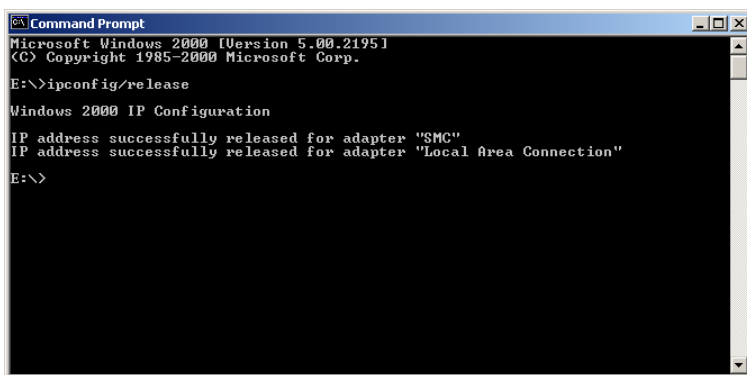

If you are still unable to get an IP Address from the Wireless Barricade, reinstall your network adapter. Please refer to your adapter manual for information on how to do this.

C. I have another IP Address displayed

If you have another IP address listed then the PC may not be configured for a DHCP connection. Please refer to “Configuring Client TCP/IP” on page 13 for information.

Once you have confirmed your computer is configured for DHCP, then please follow the steps below.

1. Open a DOS window as described above.
2. Type ipconfig/release.

```
Command Prompt
Microsoft Windows 2000 [Version 5.00.2195]
(C) Copyright 1985-2000 Microsoft Corp.

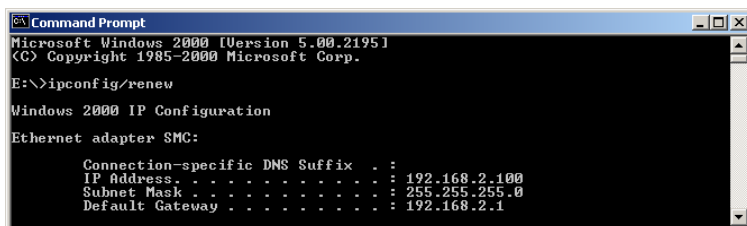

E:\>ipconfig/release

Windows 2000 IP Configuration

IP address successfully released for adapter "SMC"
IP address successfully released for adapter "Local Area Connection"

E:\>
```

3. Then type ipconfig/renew.

```
Command Prompt
Microsoft Windows 2000 [Version 5.00.2195]
(C) Copyright 1985-2000 Microsoft Corp.

E:\>ipconfig/renew

Windows 2000 IP Configuration

Ethernet adapter SMC:

    Connection-specific DNS Suffix  . :

    Default Gateway . . . . . : 192.168.2.1
```

Troubleshooting

D. The 10/100 LED does not light after a connection is made.

1. Check that the host computer and hub are both powered on.
2. Be sure the network cable is connected to both devices.
3. Verify that Category 5 cable is used if you are operating at 100 Mbps, and that the length of any cable does not exceed 100 m (328 ft).
4. Check the network card connections.
5. The 10BASE-T/100BASE-TX hub/switch port, network card, or cable may be defective.

SPECIFICATIONS

COMPLIANCES

FCC - Class B

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with instructions, may cause harmful interference to radio communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

FCC Caution: To assure continued compliance, (example - use only shielded interface cables when connecting to computer or peripheral devices) any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT NOTE: FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Industry Canada - Class B

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus as set out in the interference-causing equipment standard entitled "Digital Apparatus" ICES-003 of the Department of Communications.

Cet appareil numérique respecte les limites de bruits radioélectriques applicables aux appareils numériques de Classe B prescrites dans la norme sur le matériel brouilleur: "Appareils Numériques" NMB-003 édictée par le ministère des Communications.

EC Conformance Declaration - Class B

SMC contact for these products in Europe is:

SMC Networks Europe,
Edificio Conata II,
Calle Frutuós Gelabert 6-8, 2^o, 4^a,
08970 - Sant Joan Despí,
Barcelona, Spain.

This information technology equipment complies with the requirements of the Council Directive 89/336/EEC on the Approximation of the laws of the Member States relating to Electromagnetic Compatibility and 73/23/EEC for electrical equipment used within certain voltage limits and the Amendment Directive 93/68/EEC. For the evaluation of the compliance with these Directives, the following standards were applied:

- RFI * Limit class B according to EN 55022:1998
- Emission:* Limit class B for harmonic current emission according to EN 61000-3-2/1995
- * Limitation of voltage fluctuation and flicker in low-voltage supply system according to EN 61000-3-3/1995
- Immunity:* Product family standard according to EN 55024:1998
- * Electrostatic Discharge according to EN 61000-4-2:1995
 (Contact Discharge: ± 4 kV, Air Discharge: ± 8 kV)
- * Radio-frequency electromagnetic field according to EN 61000-4-3: 1996 (80 - 1000 MHz with 1 kHz AM 80% Modulation: 3 V/m)
- * Electrical fast transient/burst according to EN 61000-4-4:1995(AC/DC power supply: ± 1 kV, Data/Signal lines: ± 0.5 kV)
- * Surge immunity test according to EN 61000-4-5:1995(AC/DC Line to Line: ± 1 kV, AC/DC Line to Earth: ± 2 kV)
- * Immunity to conducted disturbances, Induced by radio-frequency fields: EN 61000-4-6:1996(0.15 - 80 MHz with 1 kHz AM 80% Modulation: 3 V/m)
- * Power frequency magnetic field immunity test according to EN 61000-4-8:1993(1 A/m at frequency 50 Hz)
- * Voltage dips, short interruptions and voltage variations immunity test according to EN 61000-4-11:1994(>95% Reduction @10 ms, 30% Reduction @500 ms, >95% Reduction @5000 ms)
- LVD: * EN60950(A1/1992; A2/1993; A3/1993; A4/1995; A11/1997)

LEGAL INFORMATION AND CONTACTS

SMC's Limited Warranty Statement

SMC Networks Europe ("SMC") warrants its products to be free from defects in workmanship and materials, under normal use and service, for the applicable warranty term. All SMC products carry a standard 2 year limited warranty from the date of purchase from SMC or its Authorized Reseller. SMC may, at its own discretion, repair or replace any product not operating as warranted with a similar or functionally equivalent product, during the applicable warranty term. SMC will endeavour to repair or replace any product returned under warranty within 30 days of receipt of the product. As new technologies emerge, older technologies become obsolete and SMC will, at its discretion, replace an older product in its product line with one that incorporates these newer technologies

The standard limited warranty can be upgraded to a 5 year Limited Lifetime * warranty by registering new products within 30 days of purchase from SMC or its Authorized Reseller. Registration can be accomplished via the enclosed product registration card or online via the SMC web site. Failure to register will not affect the standard limited warranty. The Limited Lifetime warranty covers a product during the Life of that Product, which is defined as a period of 5 years from the date of purchase of the product from SMC or its authorized reseller.

All products that are replaced become the property of SMC. Replacement products may be either new or reconditioned. Any replaced or repaired product carries, either a 30-day limited warranty or the remainder of the initial warranty, whichever is longer. SMC is not responsible for any custom software or firmware, configuration information, or memory data of Customer contained in, stored on, or integrated with any products returned to SMC pursuant to any warranty. Products returned to SMC should have any customer-installed accessory or add-on components, such as expansion modules, removed prior to returning the product for replacement. SMC is not responsible for these items if they are returned with the product.

Customers must contact SMC for a Return Material Authorization number prior to returning any product to SMC. Proof of purchase may be required. Any product returned to SMC without a valid Return Material Authorization (RMA) number clearly marked on the outside of the package will be returned to customer at customer's expense. Customers are responsible for all shipping charges from their facility to SMC. SMC is responsible for return shipping charges from SMC to customer.

WARRANTIES EXCLUSIVE: IF A SMC PRODUCT DOES NOT OPERATE AS WARRANTED ABOVE, CUSTOMER'S SOLE REMEDY SHALL BE REPAIR OR REPLACEMENT OF THE PRODUCT IN QUESTION, AT SMC'S OPTION. THE FOREGOING WARRANTIES AND REMEDIES ARE EXCLUSIVE AND ARE IN LIEU OF ALL OTHER WARRANTIES OR CONDITIONS, EXPRESSED OR IMPLIED, EITHER IN FACT OR BY OPERATION OF LAW, STATUTORY OR OTHERWISE,

Legal Information and Contacts

INCLUDING WARRANTIES OR CONDITIONS OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. SMC NEITHER ASSUMES NOR AUTHORIZES ANY OTHER PERSON TO ASSUME FOR IT ANY OTHER LIABILITY IN CONNECTION WITH THE SALE, INSTALLATION, MAINTENANCE OR USE OF ITS PRODUCTS. SMC SHALL NOT BE LIABLE UNDER THIS WARRANTY IF ITS TESTING AND EXAMINATION DISCLOSE THE ALLEGED DEFECT IN THE PRODUCT DOES NOT EXIST OR WAS CAUSED BY CUSTOMER'S OR ANY THIRD PERSON'S MISUSE, NEGLIGENCE, IMPROPER INSTALLATION OR TESTING, UNAUTHORIZED ATTEMPTS TO REPAIR, OR ANY OTHER CAUSE BEYOND THE RANGE OF THE INTENDED USE, OR BY ACCIDENT, FIRE, LIGHTNING, OR OTHER HAZARD.

LIMITATION OF LIABILITY: IN NO EVENT, WHETHER BASED IN CONTRACT OR TORT (INCLUDING NEGLIGENCE), SHALL SMC BE LIABLE FOR INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY KIND, OR FOR LOSS OF REVENUE, LOSS OF BUSINESS, OR OTHER FINANCIAL LOSS ARISING OUT OF OR IN CONNECTION WITH THE SALE, INSTALLATION, MAINTENANCE, USE, PERFORMANCE, FAILURE, OR INTERRUPTION OF ITS PRODUCTS, EVEN IF SMC OR ITS AUTHORIZED RESELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

SOME COUNTRIES DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES OR THE LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR CONSUMER PRODUCTS, SO THE ABOVE LIMITATIONS AND EXCLUSIONS MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, WHICH MAY VARY FROM COUNTRY TO COUNTRY. NOTHING IN THIS WARRANTY SHALL BE TAKEN TO AFFECT YOUR STATUTORY RIGHTS.

* Under the limited lifetime warranty, internal and external power supplies, fans, and cables are covered by a standard one-year warranty from date of purchase.

Full Installation Manual

Full installation manuals are provided on the Installation CD-Rom. Manuals in other languages than those included on the CD-Rom are provided on www.smc-europe.com (section support).

Firmware and Drivers

For latest driver, technical information and bug-fixes please visit www.smc-europe.com (section support).

Contact SMC

Contact details for your relevant countries are available on www.smc-europe.com and www.smc.com.

Statement of Conditions

In line with our continued efforts to improve internal design, operational function, and/or reliability, SMC reserves the right to make changes to the product(s) described in this document without notice. SMC does not assume any liability that may occur due to the use or application of the product(s) described herein. In order to obtain the most accurate knowledge of installation, bug-fixes and other product related information we advise to visit the relevant product support page at www.smc-europe.com before you start installing the equipment. All information is subject to change without notice.

Limitation of Liability

In no event, whether based in contract or tort (including negligence), shall SMC be liable for incidental, consequential, indirect, special or punitive damages of any kind, or for loss of revenue, loss of business or other financial loss arising out of or in connection with the sale, installation, maintenance, use, performance, failure or interruption of its products, even if SMC or its authorized reseller has been advised of the possibility of such damages.
